SOLIDMonitor

Current attitude & practices regarding:

-  Privacy
-  Data sharing
-  PDS (adoption potential)
-  Institutional trust
-  Domain validation: media

SOLIDMonitor - privacy

SOLIDMonitor - privacy

- **Privacy concerns** are strongly present and consistent with a growing frustration regarding lack of:
 - Transparency
 - Control
- Symptoms of **privacy cynicism**: feelings of uncertainty and powerlessness towards data practices
≈ 1/4
 - *'I doesn't matter whether or not I try to protect my data online'*
 - *'I have given up trying to protect my data online with current methods'*
 - *'I don't feel like spending a lot of time online trying to protect my personal data'*
- Signs of **digital resignation**:
 - rational acceptance of loss of privacy, uselessness of protecting oneself online

SOLIDMonitor – data sharing

65%

believes that when sharing personal data, it should be clear what benefits are associated with it

55%

wants an explanation with information on how an organization/company would use or share personal data

7%

currently feels completely comfortable with sharing his/her data online

You easily share data...

24%

in exchange for free products/
services

26%

to save time

21%

to receive personal
recommendations

SOLIDMonitor – data sharing

- Only 7% of Flemish people feel truly comfortable with sharing data online today. What could make them more comfortable?

- People want to know what benefits data sharing gives them (values)
- And what companies use it for and share it with (transparency)
- Clear and internal instructions on how to share data (ease of use)

You easily share data...

- What are contributing factors:
 - Reputation of company/org
 - Previous experience with company/org
- Some data is more sensitive than other:
 - People are okay with, for instance, sharing interests
 - Health and finance data is unsurprisingly considered less comfortable

SOLIDMonitor – PDS

7 op de 10

Flemings favors the use of personal data vaults.

70%

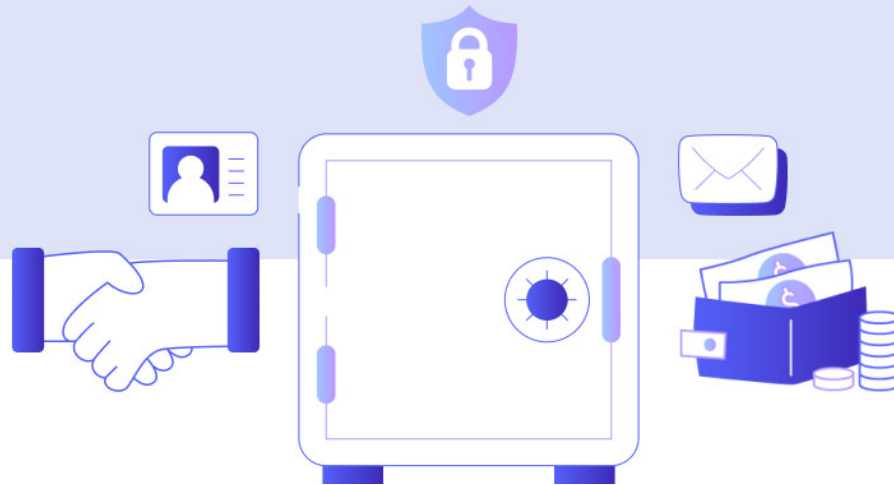

Would find personal data vaults useful in their daily lives

70%

expects that learning how to use personal data vaults would be easy for them

5 op de 10

predicts they will use it in the future.

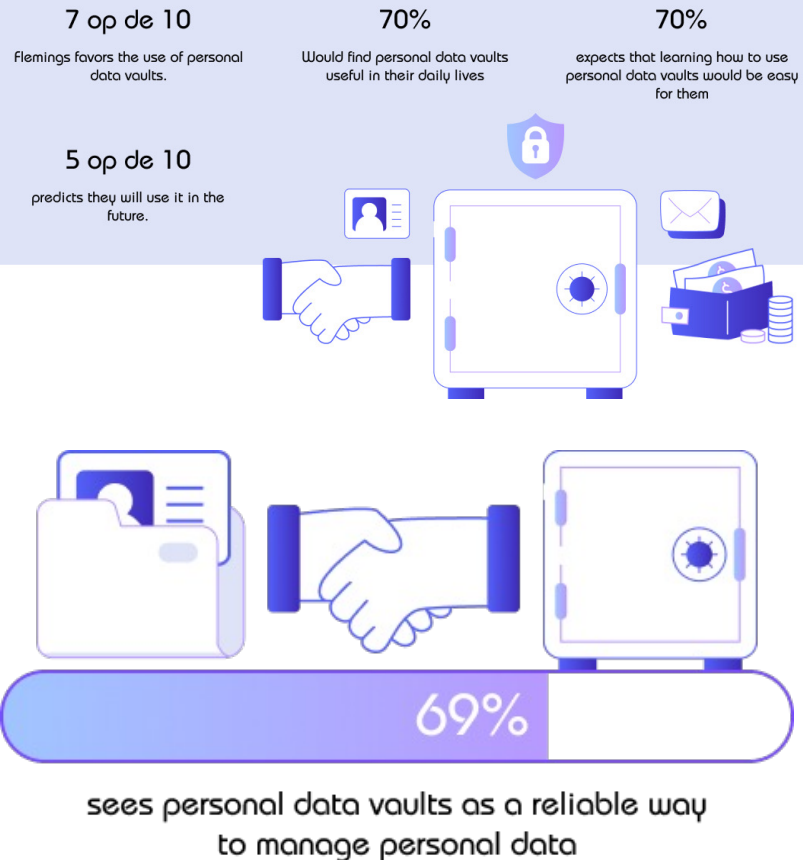

sees personal data vaults as a reliable way to manage personal data

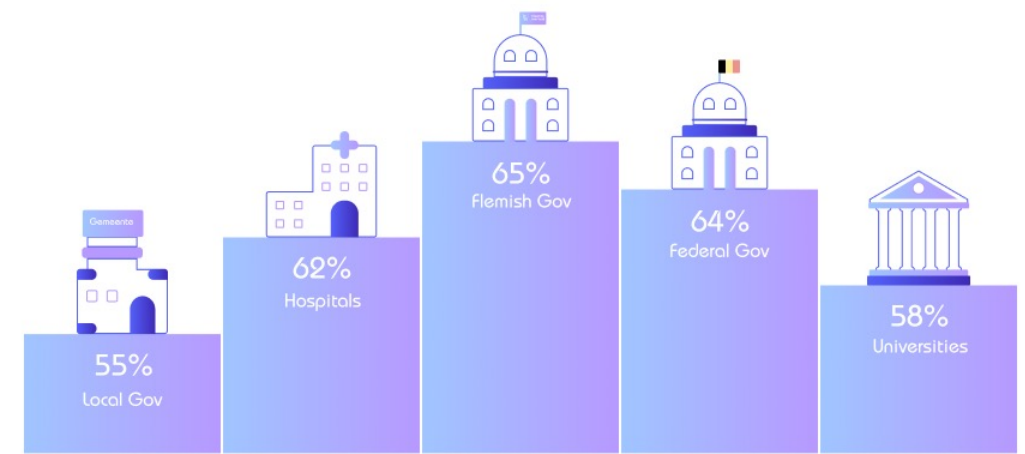

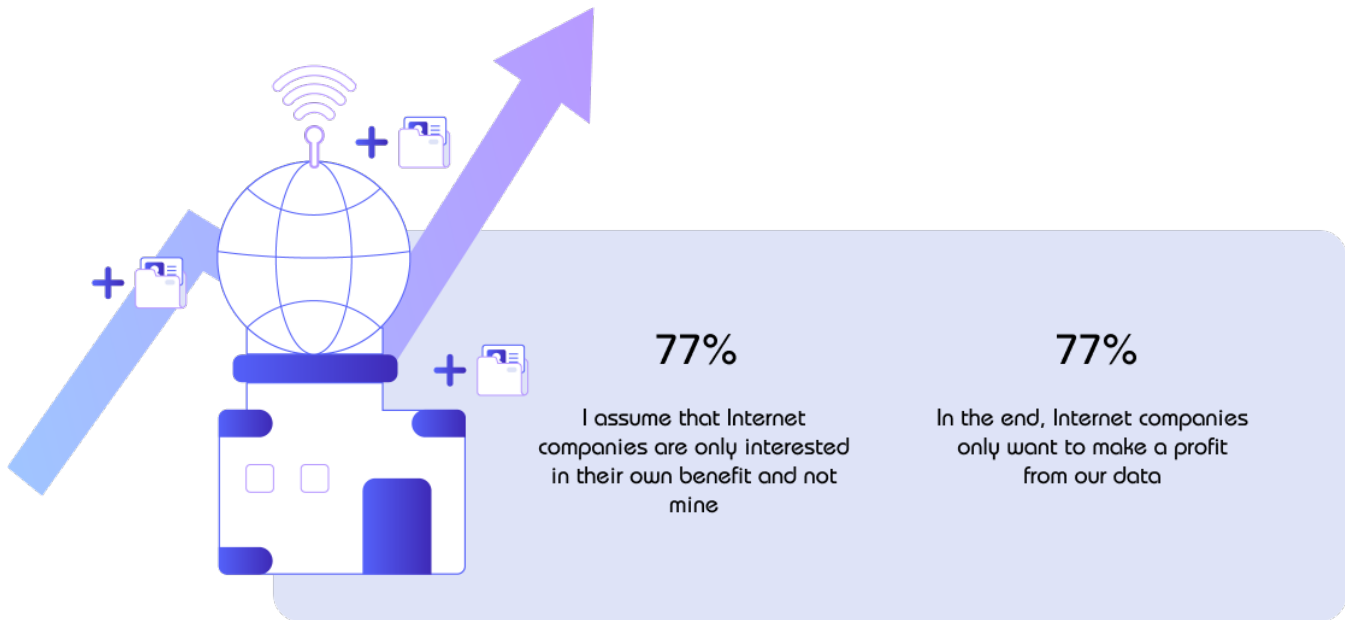

is confident private data will be secure in their personal data vault.

SOLIDMonitor – PDS

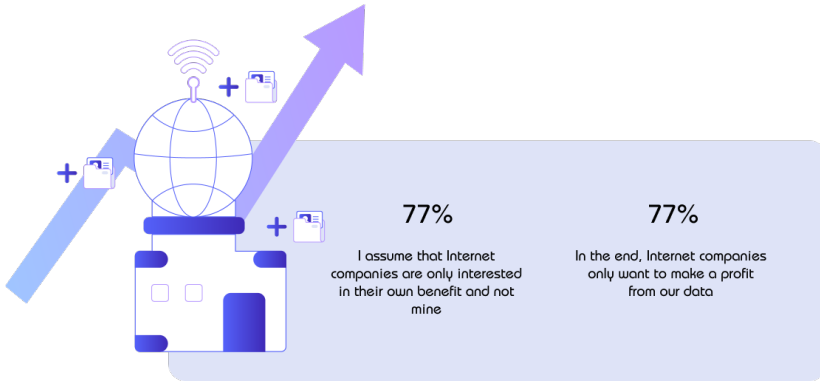

- **7/10** has positive attitude towards PDS
- **5/10** already sees themselves using PDS in the future
- Sees PDS as potential instruments for:
 - Increased transparency
 - Increased control
 - **A power shift away from Big Tech (76%)**

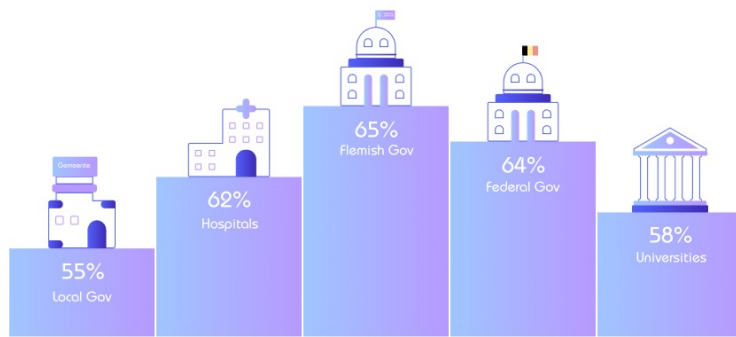

SOLIDMonitor – institutional trust

SOLIDMonitor – institutional trust

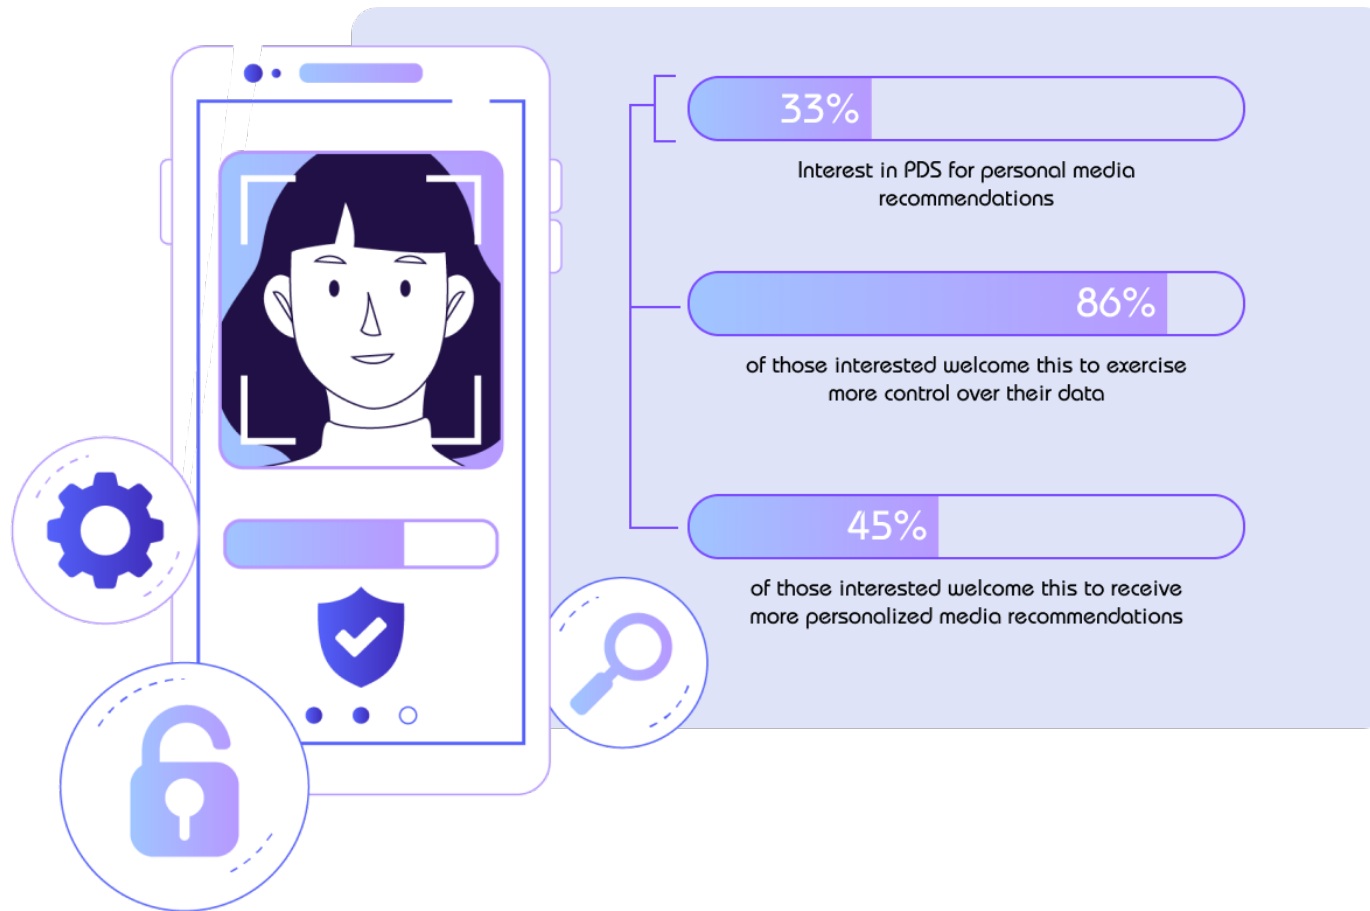

- 77 % mistrust in Internet companies and how they use personal data
- **Large traditional institutions** such as governments, hospitals, banks, insurance companies,... score highest on trust in **handling personal data**
- Unsurprisingly, social media organisations and international Internet/media companies are highly distrusted in handling personal data
- **Similar results in trust as potential providers of PDS**
 - **Flemish government scores highest (65%)**

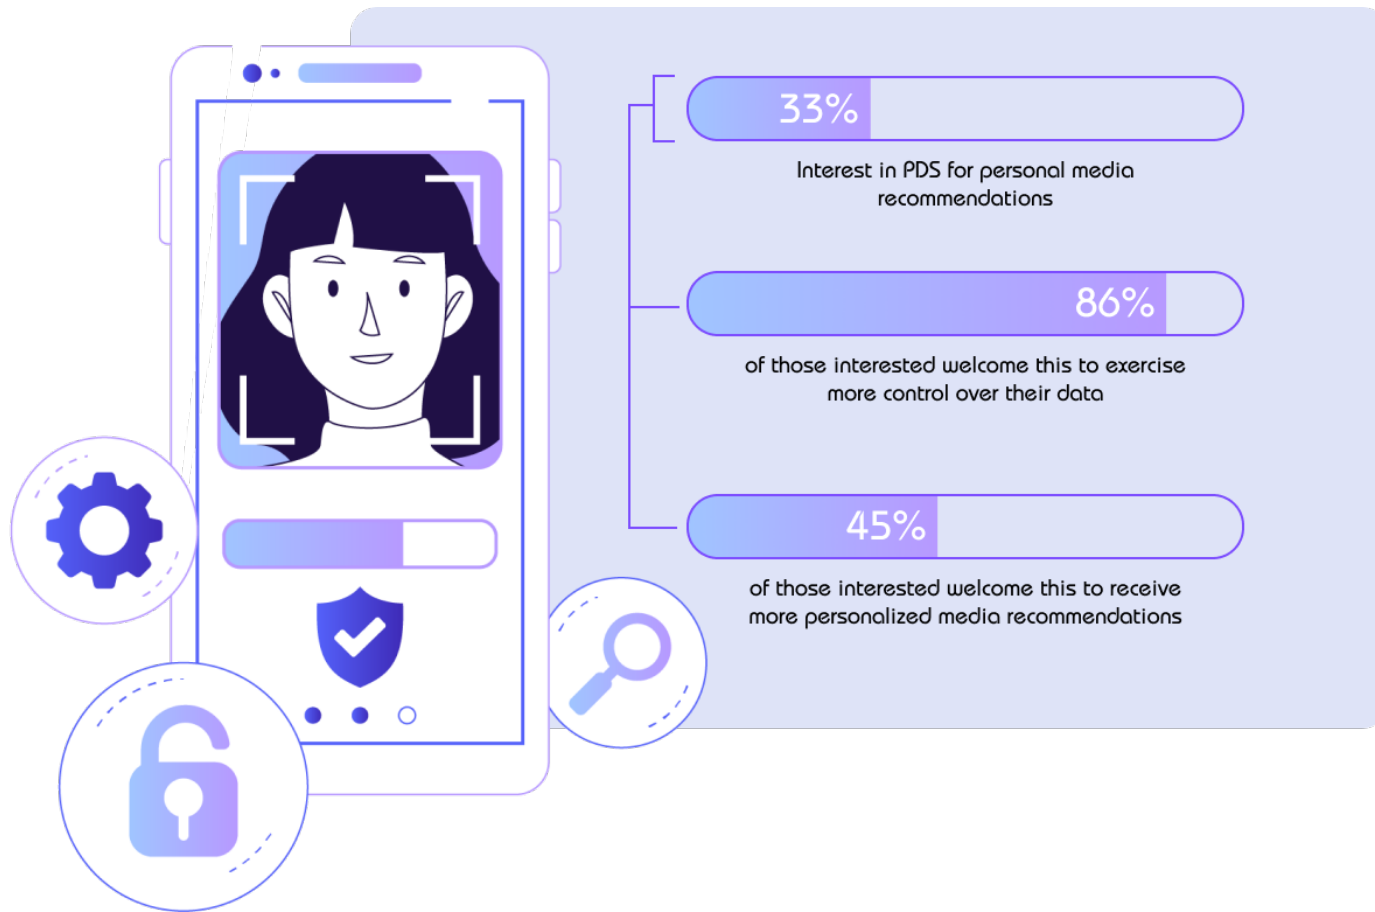

Trust in companies/orgs as potential providers of PDS

SOLIDMonitor – Media use case

SOLIDMonitor – Media use case

Media enquiry seems to confirm:

- **Transparency and control are more important** to interested people than personalised media recommendations

For personalised media recommendations:

- Data from news websites and interests enjoy most willingness to share (37%)
- Internet usage data on the other side of the spectrum (12%)

Privacy Pioniers – 34%

Privacy Pioneers (Privacy Pioniers)

Positive - techies - concerned - demanding

Argwanende Achterblijvers

26%

Suspicious Stragglers (Argwanende Achterblijver)

Negative - technoskeptical - reluctant - suspicious

Digital skills

Privacy concerns

Attitude towards PDS

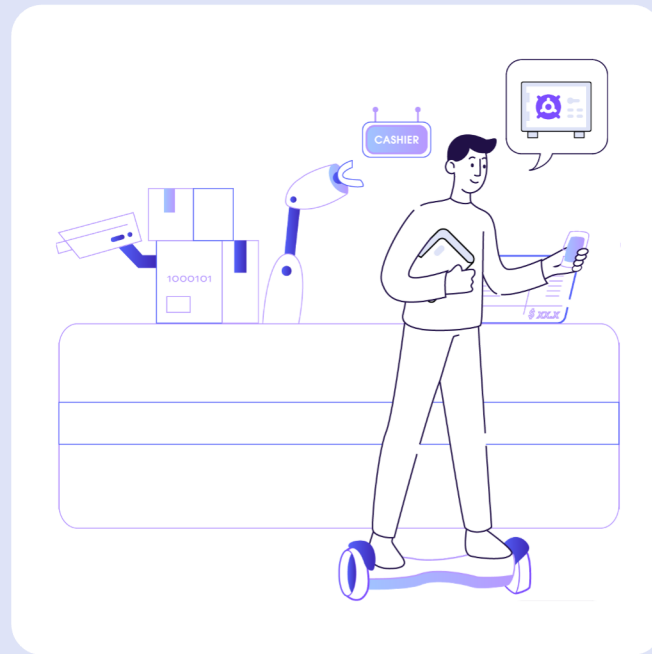

Institutional trust

Onbezorgde Opportunisten

40%

Worriless Weathercocks (Onbezorgde Opportunisten)

Optimists - Techies - laissez faire

SOLIDMonitor – What's next?

- First edition forms a basis, a foundation for future editions, but...
 - Extra focus on value creation for users apart from agency
 - Contextual differences in data sharing asks for more use case-minded approach
- Ongoing and future research:
 - Use case evaluation criteria: how can I assess a use case from a user's perspective?
 - Experiments on consent and control: do people share less or more through PDS
 - What areas should we focus on to increase user adoption/acceptance

SOLIDMonitor Preliminary results

- Adoption determinants:
 - Building trust in PDS is the crucial factor towards acceptance
 - Security/reliability, but also support networks
 - Ease of use is not a factor right now, but will likely become most crucial as the tech matures
- Use case evaluation criteria:
 - What determinants come into play when assessing a use case from a user's perspective
 - Creation of a use case model canvas (visualisation tool)
 - Parameter identification: *data types minimum, perceived short-term/long-term benefits, value identification, personal relevance, trust in stakeholders,...*
