

Workshop - Digital Driver's License

Solid Community Meeting – Mobility

17 June 2024

Gent, Belgium

Peter Mechant (imec-mict-ugent)

Over Vias institute

NEW EU DRIVING LICENCE on its way

What to expect

1 March 2023

Accompanied driving for learner drivers as of 17
Zero drink-driving tolerance for novice drivers

Young drivers are over-represented in fatal crashes

Green transition: the permitted mass of a 'B' category vehicle will be increased for zero-emission vehicles as they are heavier

WHAT IT COULD LOOK LIKE

Tests that prepare future drivers for real-life roads, e.g for **sharing roads with cyclists, e-scooters, etc. & automated driving**

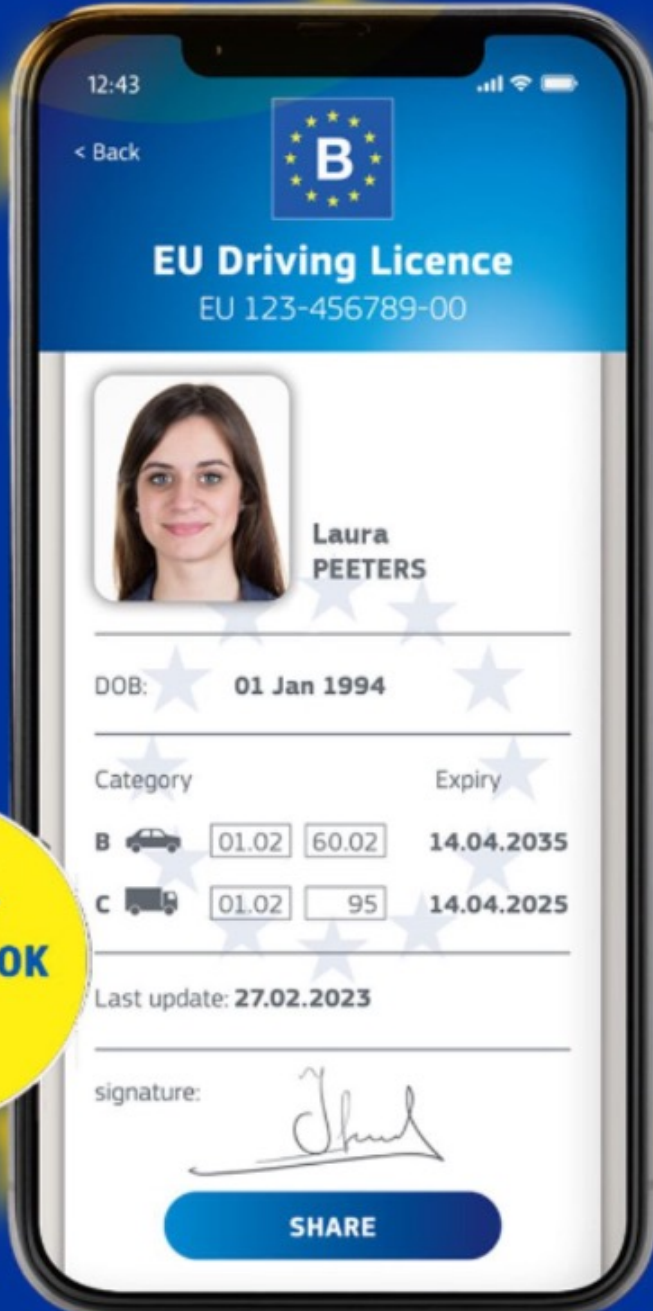

More than **40%** of non-resident drivers committing offences **pay no penalty**

Measures to ensure drivers who break road rules in other EU Member States **face the consequences**

WHAT IT COULD LOOK LIKE

Welcome Mr. Smith!

Please scan Fingerprint
to confirm Driver ID

MODE AUTO OFF DUAL CLIMATE A/C

Use case

A technological driver's license control system verifies if a person can be linked to a valid driver's license. If a driver's license is revoked, the car cannot be started. This use case also prioritizes data minimization, so only the answer to the question "does the person have a valid driver's license? Yes/No" is sufficient, and no additional data is needed to start the car.
