Intelligent services based on data

HOEVEELHEID DATA

Athumi specializes in access to **premium data**

EU Recognised
Data Intermediary

Building trust in data collaboration. How?

Define common standards

Common rules and agreements for a seamless data exchange between organisations.

Build technical backbone

Reliable infrastructure that connects data between industries in a common way.

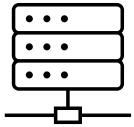

Set up governance

Clear roles, responsibilities and commitments for building sustainable trust.

3 patterns of data collaboration

1 plug for data

Create a single point of access to securely and efficiently retrieve and share sensitive data across sectors.

Connect partners in a digital value chain

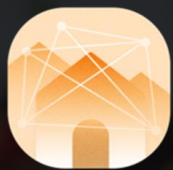

Connect every step in complex value chains through standardised data flows for faster, error-free and scalable processes.

Keep agency over data

Use data pods to share personal data with organisations you trust. Centrally manage individual consents and ensure they can be revoked at any time.

Hoge waarde

At the intersection of public and private

We deliver **direct economic value** to businesses and governments by collaborating on sensitive data, while also creating **indirect value** for **society** and **individuals** by enabling the secure sharing of sensitive data in line with European values without losing control.
